<input type="checkbox"/> Total of _____ forms are submitted			

This collection of information is required by 35 U.S.C. 132. The information is required to obtain or retain a benefit by the public which is to file (and by the USPTO to process) an application. Confidentiality is governed by 35 U.S.C. 122 and 37 CFR 1.11, 1.14 and 41.8. This collection is estimated to take 12 minutes to complete, including gathering, preparing, and submitting the completed application form to the USPTO. Time will vary depending upon the individual case. Any comments on the amount of time you require to complete this form and/or suggestions for reducing this burden, should be sent to the Chief Information Officer, U.S. Patent and Trademark Office, U.S. Department of Commerce, P.O. Box 1450, Alexandria, VA 22313-1450. DO NOT SEND FEES OR COMPLETED FORMS TO THIS ADDRESS. SEND TO: Mail Stop AF, Commissioner for Patents, P.O. Box 1450, Alexandria, VA 22313-1450.

If you need assistance in completing the form, call 1-800-PYO-9199 and select option 2

Title: REMOTE MONITORING OF RAIL LINE WAYSIDE EQUIPMENT

Mail Stop AF
Commissioner for Patents
P.O. Box 1450
Alexandria, VA 22313-1450ARGUMENTS SUPPORTING PRE-APPEAL BRIEF REVIEW

The applicants submit the following concise set of arguments for which the pre-brief review is being requested.

The applicants' first argue that the Examiner has failed to establish a *prima facie* case of obviousness. The Examiner has combined the Ehrenberger and Cardella references to support the rejections under 35 USC 103(a). The teaching or suggestion to make such a combination must be found in the prior art. (MPEP 2143) In the final rejection paper mailed 06/14/2005, the Examiner supports the rejections by stating that "The Examiner feels that the combination of these two links, from the wayside device to the locomotive [Ehrenberger] and from the locomotive to a remote location [Cardella] is an obvious relay for information to be passed from the wayside equipment to the remote location." However, what the Examiner "feels" does not establish *prima facie* obviousness. The mere fact that the references can be combined does not render the resultant combination obvious unless the prior art also suggests the desirability of the combination. The Examiner has not identified any suggestion or motivation in

10/774,967

the references to make the suggested combination, and therefore has failed to establish a *prima facie* case for obviousness.

Secondly, the applicants argue that the Examiner has also failed to establish *prima facie* obviousness because he has not addressed all of the limitations of all of the claims. The Examiner has referred generally to limitations that are contained in the independent claims without specifically addressing the unique limitations of each independent claim. The Examiner has also specifically addressed certain limitations of a few of the dependent claims, but he has failed to even mention other limitations contained in other claims. For example and without intending to be all-inclusive, the Examiner has not identified any teaching in the art for the following claim limitations:

<u>Claim #</u>	<u>Limitation</u>
6	a sensor detecting an output of a human-observable annunciator
11, 22	the first communications link and the second communications link comprise two-way communication devices
14, 24	a polling signal generated from a location remote from the wayside location
19	the sensor is disposed on a railroad locomotive
25	processing the signal at the wayside location to generate information; and transmitting the information to a database remote from the wayside location
28	populating a failure database when the information is indicative of a failure of the equipment
29	populating a report from the failure database
30	transmitting the information from the locomotive to a location remote from the wayside location via a communication link also used for transmitting information regarding an operating status of the locomotive to a data center

10/774,967

<u>Claim #</u>	<u>Limitation</u>
31	sensing the operation of an annunciator for railroad grade crossing equipment at a grade crossing location in response to a railroad locomotive passing the grade crossing location; generating information responsive to the sensed operation and indicative of an operating status of the annunciator; transmitting the information from the grade crossing location to the railroad locomotive; and transmitting the information from the railroad locomotive to a location remote from the grade crossing location.

Thus, the final rejections of claims 1-31 under 35 USC 103(a) are defective and should be withdrawn.

Respectfully submitted,

David G. Maire (Reg. No. 34,865)
